Chapter 1 Economic Freedom of the World in 2020

Economic Freedom of the World is an ongoing research project. As Milton Friedman stated in his foreword to the initial report, *Economic Freedom of the World: 1975–1995* (Gwartney, Lawson, and Block, 1996), additional work would be necessary to "bring the indexes of economic freedom up to date and to incorporate the additional understanding that will be generated".

This year's annual report reflects our continued effort to improve the accuracy of the Economic Freedom of the World (EFW) measure. We urge users of the EFW index to use the data only from the most recent report because of data updates and changes to the report's methodology over time. All the ratings for all countries and years for which we have ratings are available in each year's datafile.

What is economic freedom?

Economic freedom is based on the concept of self-ownership. Because of this self-ownership, individuals have a right to choose—to decide how to use their time and talents to shape their lives. On the other hand, they do not have a right to the time, talents, and resources of others. Thus, they have no right to take things from others or demand that others provide things for them.

The cornerstones of economic freedom are personal choice, voluntary exchange, open markets, and clearly defined and enforced property rights. Individuals are economically free when they are permitted to choose for themselves and engage in voluntary transactions as long as they do not harm the person or property of others. When economic freedom is present, the choices of individuals will decide what and how goods and services are produced. Put another way, economically free individuals will be permitted to decide for themselves rather than having options imposed on them by the political process or the use of violence, theft, or fraud by others.

The EFW index is designed to measure the degree to which the institutions and policies of countries are consistent with economic freedom. In order to achieve a high EFW rating, a country must do some things, but refrain from others. Governments enhance economic freedom when they provide an infrastructure for voluntary exchange, and protect individuals and their property from aggressors using violence, coercion, and fraud to seize things that do not belong to them. To this end, the legal system is particularly important. The country's legal institutions must protect the person and property of all individuals from the aggressive acts of others and enforce contracts in an even-handed manner. Access must also be provided to a sound money that results in macroeconomic price stability and predictability. Governments must also refrain from actions

that restrict personal choice, interfere with voluntary exchange, and limit entry into markets. Economic freedom is reduced when taxes, government expenditures, and regulations are substituted for personal choice, voluntary exchange, and market coordination.

The EFW measure might be thought of as a measure of the degree to which scarce resources are allocated by personal choices coordinated by markets rather than centralized planning directed by the political process. It might also be thought of as an effort to identify how closely the institutions and policies of a country correspond with the classical liberal ideal of a limited government, where the government protects property rights and arranges for the provision of a limited set of "public goods" such as national defense and access to money of sound value, but little beyond these core functions. To a large degree, a country's EFW summary rating is a measure of how closely its institutions and policies compare with the idealized structure implied by standard textbook analysis of microeconomics.

The Economic Freedom of the World index—an overview

The EFW index provides a comprehensive measure of the consistency of a country's institutions and policies with economic freedom. It is an outgrowth of a series of six conferences hosted by Milton and Rose Friedman and Michael Walker from 1986 to 1994, which produced three books (Walker, 1988; Block, 1991; Easton and Walker, 1992) reporting the various prototypes and approaches examined in the discussions that culminated in the initial publication, *Economic Freedom of the World: 1975-1995*. In addition to the Friedmans, several of the world's leading economists including Douglass North, Gary Becker, Peter Bauer, William Niskanen, and Gordon Tullock participated in the discussions leading to the EFW index. The index is published by a network of institutes spearheaded by the Fraser Institute in Canada. Members of the network and other interested parties meet annually to review the structure of the index and consider ideas for its improvement.

The construction of the EFW index is based on three important methodological principles. First, objective sources of data are preferred to those that involve surveys or value judgments. With that said, given the multidimensional nature of economic freedom and the importance of legal and regulatory elements, it is sometimes necessary to use data based on surveys, expert panels, and generic case studies. To the fullest extent possible, however, the index uses objective sources of data. Second, the data used to construct the index ratings are from external sources such as the International Monetary Fund, World Bank, and World Economic Forum that provide data for a large number of countries. Data provided directly from a source within a country are rarely used. Importantly, the value judgments of the authors or others in the Economic Freedom Network are never used to alter the raw data or the rating of any country. Third, transparency is present throughout. The report provides information about the data sources, the methodology used to transform raw data into the ratings of the components and sub-components and how these ratings are used to construct both the area and summary ratings. Methodological details can be found in the Appendix:

Explanatory Notes and Data Sources of this report (pp. 215–228). The entire data set used in the construction of the index is freely available to researchers at <www.fraserinstitute.org/economic-freedom/dataset>.

The EFW index rates 165 jurisdictions. The data are available annually from 2000 to 2020 and for years ending in zero or five back to 1970. This dataset makes it possible for scholars to analyze the impact of both cross-country differences in economic freedom and changes in that freedom across several decades. The EFW measure is a valuable tool for scholars seeking to examine the contribution of economic institutions more thoroughly and disentangle their influence from political, climatic, locational, cultural, and historical factors as determinants of growth and development.

Structure of the EFW index

Exhibit 1.1 indicates the structure of the EFW index. The index measures the degree of economic freedom present in five major areas: [1] Size of Government, [2] Legal System and Property Rights, [3] Sound Money [4] Freedom to Trade Internationally, and [5] Regulation of credit, labor, and business.

Within the five major areas, there are 24 components in the index. Many of the components are themselves made up of several sub-components. In total, the index incorporates 42 distinct variables. Each component (and sub-component) is placed on a scale from 0 to 10 that reflects the distribution of the underlying data. When sub-components are present, they are averaged to derive the component rating. The component ratings within each area are then averaged to derive ratings for each of the five areas. In turn, the five area ratings are averaged to derive the summary rating for each country.

Area 1: Size of Government focuses on how government expenditures and tax rates affect economic freedom. Taken together, the five components of Area I measure the degree to which a country relies on personal choice and markets rather than government budgets and political decision-making. Countries with lower levels of government spending, lower marginal tax rates, and less government investment and state ownership of assets earn the highest ratings in this area.

Area 2: Legal System and Property Rights focuses on the importance of the legal system as a determinant of economic freedom. Protection of persons and their rightfully acquired property is a central element of economic freedom. Many would argue that it is the most important function of government. The key ingredients of a legal system consistent with economic freedom are rule of law, security of property rights, an independent and unbiased judiciary, and impartial and effective enforcement of the law. The eight components of Area 2 are indicators of how effectively the protective functions of government are performed.

In 2017, we introduced an adjustment to the rating of Area 2 that reflects cross-country differences in legal rights based on gender. See Rosemarie Fike's description in Chapter 3 of the 2017 report (Fike, 2017) for the details on this adjustment. This method was updated in 2021 by Dr. Fike as described in last year's report (Gwartney, Lawson, Hall, and Murphy, 2021: 5–6). The Fraser Institute has created a stand-alone website (womenandprogress.org) that explores how economic freedom contributes to women's advancement.

Exhibit 1.1: Areas, Components, and Sub-components of the EFW Index

1. Size of Government

- A. Government consumption
- B. Transfers and subsidies
- C. Government investment

- D. Top marginal tax rate
 - (i) Top marginal income tax rate
 - (ii) Top marginal income and payroll tax rates
- E. State ownership of assets

2. Legal System and Property Rights

- A. Judicial independence
- B. Impartial courts
- C. Protection of property rights
- D. Military interference in rule of law and politics
- E. Integrity of the legal system
- F. Legal enforcement of contracts
- G. Regulatory costs of the sale of real property
- H. Reliability of police

Note: Area 2 ratings are adjusted by the Gender Legal Rights Adjustment (Fike, 2017) to reflect disparities in the legal treatment of women.

3. Sound Money

- A. Money growth
- B. Standard deviation of inflation

- C. Inflation: most recent year
- D. Freedom to own foreign currency bank accounts

4. Freedom to Trade Internationally

- A. Tariffs
 - (i) Revenue from trade taxes (% of trade sector)
 - (ii) Mean tariff rate
 - (iii) Standard deviation of tariff rates
- B. Regulatory trade barriers
 - (i) Non-tariff trade barriers
 - (ii) Compliance costs of importing and exporting

- C. Black-market exchange rates
- D. Controls of the movement of capital and people
 - (i) Financial openness
 - (ii) Capital controls
 - (iii) Freedom of foreigners to visit

5. Regulation

- A. Credit market regulations
 - (i) Ownership of banks
 - (ii) Private sector credit
 - (iii) Interest rate controls / negative real interest rates
- B. Labor market regulations
 - (i) Hiring regulations and minimum wage
 - (ii) Hiring and firing regulations
 - (iii) Centralized collective bargaining
 - (iv) Hours regulations

- (v) Mandated cost of worker dismissal
- (vi) Conscription
- C. Business regulations
 - (i) Administrative requirements
 - (ii) Bureaucracy costs
 - (iii) Starting a business
 - (iv) Impartial public administration
 - (v) Licensing restrictions
 - (vi) Cost of tax compliance

Area 3: Sound Money focuses on the importance of money and relative price stability in the exchange process. Sound money—money with relatively stable purchasing power across time—reduces transaction costs and facilitates exchange, thereby promoting economic freedom. The four components of this area provide a measure of the extent to which people in different countries have access to sound money. In order to earn a high rating in Area 3, a country must follow policies and adopt institutions that lead to low (and stable) rates of inflation and avoid regulations that limit the ability to use alternative currencies.

Area 4: Freedom to Trade Internationally focuses on exchange across national boundaries. In our modern world, freedom to trade with people in other countries is an important ingredient of economic freedom. When governments impose restrictions that reduce the ability of their residents to engage in voluntary exchange with people in other countries, economic freedom is diminished. The components in Area 4 are designed to measure a wide variety of trade restrictions: tariffs, quotas, hidden administrative restraints, and controls on exchange rates and the movement of capital. In order to get a high rating in this area, a country must have low tariffs, easy clearance and efficient administration of customs, a freely convertible currency, and few controls on the movement of physical and human capital.

Area 5: Regulation measures how regulations that restrict entry into markets and interfere with the freedom to engage in voluntary exchange reduce economic freedom. The components of Area 5 focus on regulatory restraints that limit the freedom of exchange in credit, labor, and product markets.

Key changes and issues in the EFW index in the 2022 Annual Report

Sources: The World Bank announced last year that it was canceling the *Doing Business* report, and the World Economic Forum (WEF) has, for the second year in a row, elected not to release new ratings in its *Global Competitiveness Report / Executive Opinion Survey*. As a result, we were unable to update fully several components of the EFW index that rely on those sources. While we remain confident that the WEF will return to publishing their ratings, we are currently investigating alternatives to the *Doing Business* data. We are hopeful that the *Doing Business* project will reemerge in some form (see ch. 4, pp. 201–214, in this publication). For the time being, we are still carrying forward these data from the *2020 Annual Report*.

V-Dem database: Fortunately, we recently began integrating a number of variables from the Varieties of Democracy (V-Dem) database (Coppedge *et al.*, 2022) into the EFW index, mostly by combining V-Dem data with WEF data in selected components. As a result, we do still see some vaiation in those components over time.

Component 3A (Money Growth) was previously based on a narrower monetary aggregate, but now is based on a broader monetary aggregate (close to what used to be called M2). The entire series was updated to reflect this change.

The EFW Panel Dataset is now entirely based on the chain-linking method we have used in previous reports, with the change this year being that we updated the base year to 2020 and will make the most recent year's data the base year in the future.

Construction of Area and Summary ratings

Theory provides us with some direction about elements that should be included in the five areas and the summary index, but it does not indicate what weights should be attached to the components within the areas or among the areas in the construction of the summary index. It would be convenient if these factors were independent of each other and a weight could be attached to each of them. In the past, we investigated several methods of weighting the various components, including principle component analysis and a survey of economists. We have also invited others to use their own weighting structure if they believe that it is preferable. Our experience indicates that the summary index is not very sensitive to alternative weighting methods.

Furthermore, there is reason to question whether the areas (and components) are independent or work together like the wheels, motor, transmission, driveshaft, and frame of a car. Just as these interconnected parts provide for the mobility of an automobile, it may be the combination of interrelated factors that brings about economic freedom. Which is more important for the mobility of an automobile: the motor, wheels, or transmission? The question cannot be easily answered because the parts work together. If any of these key parts break down, the car is immobile. Institutional quality may be much the same. If any of the key parts are absent, the overall effectiveness is undermined.

As the result of these two considerations, we organize the elements of the index in a manner that seems sensible to us but we make no attempt to weight the components in any special way when deriving either area or summary ratings. Of course, the component and sub-component data are available to researchers who would like to consider alternative weighting schemes and we encourage them to do so.

Summary Economic Freedom ratings in 2020

Exhibits 1.2a and 1.2b (pp. 8–9) present the summary economic-freedom ratings, sorted from highest to lowest, for the 165 jurisdictions of this year's report. These ratings are for 2020, the most recent year for which comprehensive data are available. Hong Kong and Singapore, as usual, occupy the top two positions. The next highest scoring nations are Switzerland, New Zealand, Denmark, Australia, United States, Estonia, Mauritius, and Ireland.

The rankings of some other major countries are Japan (12th), Germany (24th), Italy (43rd), France (54th), Mexico (65th), India (90th), Russia (94th), Brazil (114th), and China (116th). The 10 lowest-rated countries are: Democratic Republic of Congo, Algeria, Republic of Congo, Iran, Libya, Argentina, Syria, Zimbabwe, Sudan, and Venezuela.

The policy responses to the coronavirus pandemic, including massive increases in government spending, monetary expansion, travel restrictions, regulatory mandates on businesses related to masks, hours, and capacity, and outright lockdowns undoubtedly contributed to an erosion of economic freedom for most people. Not surprisingly, virtually all jurisdictions, 146 out of the 165 to be exact, recorded lower scores in 2020 than in 2019, and the global average of the summary EFW index fell by 0.18 points. The following components and subcomponents fell by an average of 0.3 points or more: 1A and 1B, reflecting the expansionary fiscal policy; 2E, likely reflecting the various lock-downs and other restrictive

pandemic-related regulations; 3A, the result of monetary expansion; 4Diii, because of the global restrictions on international travel; and 5Aii, which is driven by excessive government borrowing.

We take no position on the efficacy of these various policies designed to deal with the coronavirus pandemic; they very well may have saved millions of lives, or they may have been completely ineffectual. That is a question for epidemiologists and health economists to work out. Our concern is economic freedom, and, on that margin, there is no question that government policies responding to the coronavirus pandemic have reduced economic freedom, at least as we measure it.

Hong Kong has been in the first position at the top of the EFW index for all years for which we have data, and this remains the case in 2020. In previous annual reports, we sounded the alarm bell about signs of declining economic—and other—freedoms in Hong Kong. In particular, we highlighted the new security law imposed in 2020 by the Chinese government with potential sentences of life imprisonment and the accompanying arrests in its aftermath. In this year's report, Hong Kong's overall EFW rating fell by a stunning 0.28 points to 8.59 for 2020 from 8.87 in 2019. How much of that decline is related to China's economic and political crackdown in Hong Kong and how much is related to the coronavirus pandemic is difficult to discern, but we do note that Hong Kong's decline was much larger than the world's average decline. It seems reasonable to assume that much of this decline was related to China's new harsh policies in Hong Kong and is not entirely the fault of the pandemic policies.

Ratings and rankings in 2020 for the five Areas of the index and the Components of Area 5

Exhibit 1.3 (pp. 10–14) presents the ratings (and rankings) for each of the five areas of the index and for Components 5A, 5B, and 5C. A number of interesting patterns emerge from an analysis of these data. High-income industrial economies generally rank quite high for Legal System and Property Rights (Area 2), Sound Money (Area 3), and Freedom to Trade Internationally (Area 4). Their ratings were lower, however, for Size of Government (Area 1) and Regulation (Area 5), particularly regulation of labor markets (Component 5B). This was particularly true for the high-income countries of Western Europe.

On the other hand, a number of developing nations have a small fiscal size of government but rate low in other areas and, as a result, have a low overall rating. The lesson from this is clear: a small fiscal size of government is insufficient to ensure economic freedom. The institutions of economic freedom, such as the rule of law and property rights, as well as sound money, trade openness, and sensible regulation are also required.

As the area ratings show, weakness in the rule of law and property rights is particularly pronounced in Sub-Saharan Africa, among Islamic nations, and for some nations that were formerly part of the Soviet bloc, though several countries in the latter group have made impressive strides toward improvement. Many nations in Latin America and Southeast Asia also score poorly for rule of law and property rights. The nations that rank poorly in this category also tend to score poorly in the trade and regulation areas, even though several have reasonably sized governments and sound money.

The EFW Panel Dataset

Over the years, the EFW index has become more comprehensive and the available data more complete. As a result, the number and composition of the components and sub-components for many countries vary across time. This makes it difficult to directly compare index values from earlier periods with those of later periods. To assist researchers who are interested in a consistent time-series for a particular country and/or longitudinal data for a panel of countries, we have developed the EFW Panel Dataset.

The EFW Panel Dataset is a chain-linked version of the index as described in previous editions (Gwartney, Lawson, Hall, and Murphy, 2021: 16). It uses the most recent year as the base year, and changes in a country's scores backward in time are based only on changes in components that were present in adjoining years. It should be noted that the EFW Panel Dataset contains area and summary ratings only for those years in which the country received a regular EFW index rating. Because some data for earlier years may have been updated or corrected, researchers are always encouraged to use the data from the most recent annual report to assure the most reliable figures.

Exhibit 1.4 presents the global average for all 123 nations with complete data since 2000. It shows that the world average fell to 6.84 from 7.00 between 2019 and 2020—a 0.16 point decline. This erases a decade's worth of improvement in the global average and is more than three times larger than the global decline witnessed in the 2008/09 financial crisis. The coronavirus pandemic was undoubtedly a catastrophe for economic freedom.

Exhibit 1.4: Average Economic Freedom Rating, 2000-2020

Economic freedom and human progress

As is customary, this chapter concludes with some simple graphs illustrating relationships between economic freedom and various other indicators of human progress (Exhibits 1.5–1.12). The graphs use the average of the EFW panel dataset for the period from 2000 to 2020, breaking the data into four quartiles ordered from least free to most free. Because persistence is important and the impact of economic freedom will be felt over a lengthy time period, it is better to use the average rating over a fairly long time span rather than the current rating to observe the impact of economic freedom on performance.

The graphs begin with the data on the relationship between economic freedom and the level of per-capita GDP. In recent years, numerous scholarly studies have analyzed these relationships in detail and, almost without exception, have found that countries with higher and improving economic freedom grow more rapidly and achieve higher levels of per-capita GDP (Hall and Lawson, 2014; and Lawson, Ch. 3. Economic Freedom in the Literature: What Is It Good (Bad) For?, pp. 187–200 in this edition). Many of the relationships illustrated in the graphs below reflect the impact of economic freedom as it works through increasing percapita income. Thus, we are not necessarily arguing that there is a direct causal relation between economic freedom and the variables considered below. While these graphics are no substitute for scholarly investigation that controls for other factors, they nonetheless provide some insights into the contrast between market-oriented economies and those dominated by government regulation and planning. At the very least, these figures suggest fruitful areas for future research.

Exhibit 1.5: Economic Freedom and Income per Capita

Countries with greater economic freedom have substantially higher per-capita incomes.

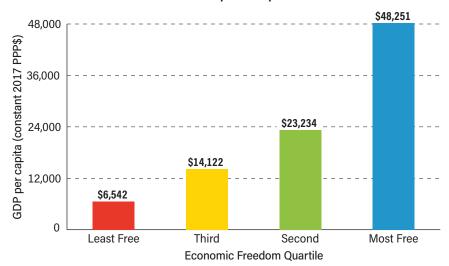

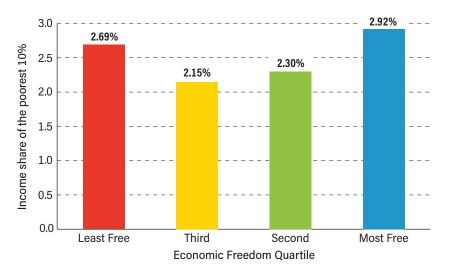

Exhibit 1.6: Economic Freedom and the Income Share of the Poorest 10%

The share of income earned by the poorest 10% of the population is unrelated to economic freedom.

Sources: *Economic Freedom of the World: 2022 Report*; World Bank, 2022, *World Development Indicators* [on-line database].

Exhibit 1.7: Economic Freedom and the Income Earned by the Poorest 10%

The amount of income, as opposed to the share, earned by the poorest 10% of the population is much higher in countries with higher economic freedom.

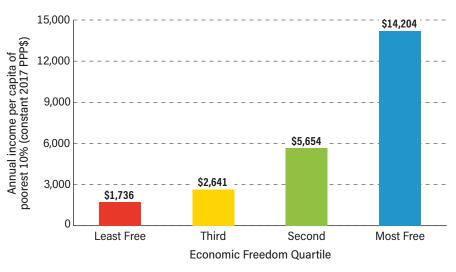

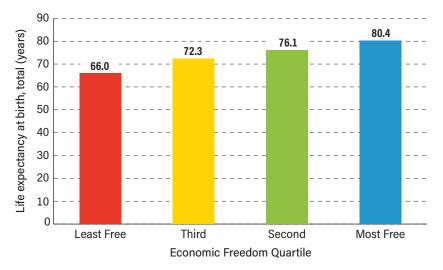

Exhibit 1.8: Economic Freedom and Life Expectancy

Life expectancy is almost 15 years longer in countries with the most economic freedom than in countries with the least.

Sources: Economic Freedom of the World: 2022 Report; World Bank, 2022, World Development Indicators [on-line database].

Exhibit 1.9: Economic Freedom and Infant Mortality Rate

The infant mortality rate is almost ten times higher in nations in the lowest quartile of economic freedom than in nations in the highest quartile.

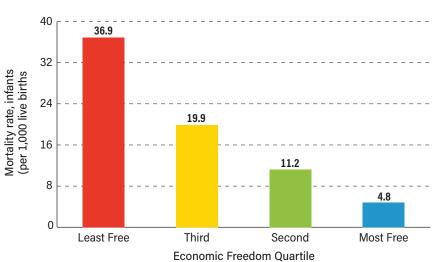

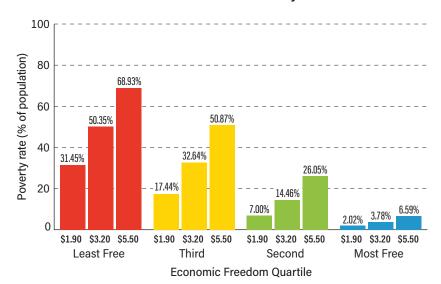

Exhibit 1.10: The Effect of Economic Freedom on Poverty Rates

Poverty rates are lower in countries with more economic freedom.

Note: The columns show the percentage of a country's population that lives on \$1.90 per day, \$3.20 per day, or \$5.50 per day, in 2011 constant PPP-adjusted dollars. Sources: *Economic Freedom of the World: 2022 Report*; World Bank, 2022, *World Development Indicators* [on-line database].

Exhibit 1.11: Economic Freedom and School Enrollment

School enrollment is higher in countries with greater economic freedom.

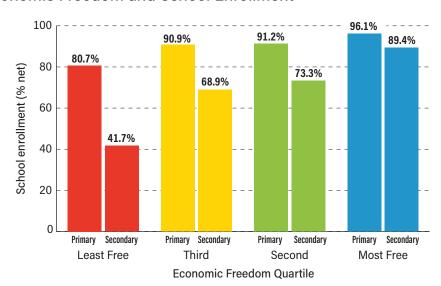

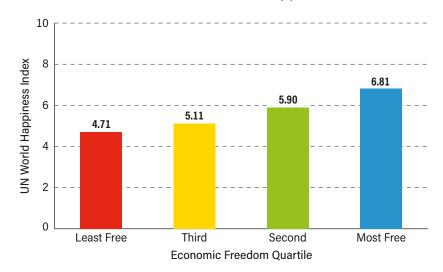

Exhibit 1.12: Economic Freedom and the UN World Happiness Index

People report that they are happier in countries with greater economic freedom.

Sources: Economic Freedom of the World: 2022 Report; United Nations, World Happiness Report 2022.
